

## Project 5 To Do:

If this was to be cleaned up, here are some do to list.

1. Redo the data dictionary. And don't store the data dictionary at every stage. I didn't go back to the data dictionary, even when it was a good option.
2. Or go back and reuse the data dictionary from a standard point, like the after the standard scaler is applied.
3. Add more classifier models.
